

“ eServices to Power your Business Forward ”

■ eServices for de Facto S5 ERP System

eServices is the powerful, cutting edge solution from De Facto Software. Built on the powerful and reliable .Net platform, eServices capabilities are fully integrated into de Facto S5's Financials, Logistics and Stock data. It is a fully dynamic system utilising data directly from your ERP database, and not a third party add-on or plug-in system that extracts data to a hosting system.

eServices

- ▶ eBusiness
Create a full B2B environment for your business.
- ▶ eDesign
Create a standard website or use your existing one.
- ▶ eData
Allow your customers access to extra information

■ eBusiness for eCommerce Capabilities

eBusiness provides a full B2B (Business to Business) environment that can be totally designed by the user without the use of standard templates or web coding skills.

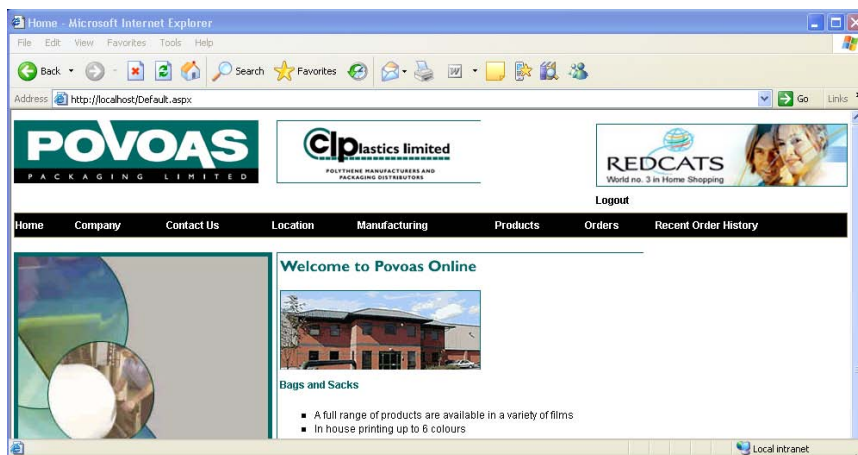

■ Extend your Capabilities

Along with the eBusiness capabilities, eServices also provides two other important elements. Firstly, eDesign which provides the functionality to build your standard web site from scratch (using flexible content management that is totally under the user's control) or use/extend your existing web site. Secondly, eData which extends the dynamic links that exist to the de Facto S5 database and allows you to create access for you partners to a whole array of extra information. Whatever your business model, de Facto eServices can handle your requirements.

eDesign - an Integrated, yet Totally Flexible Solution

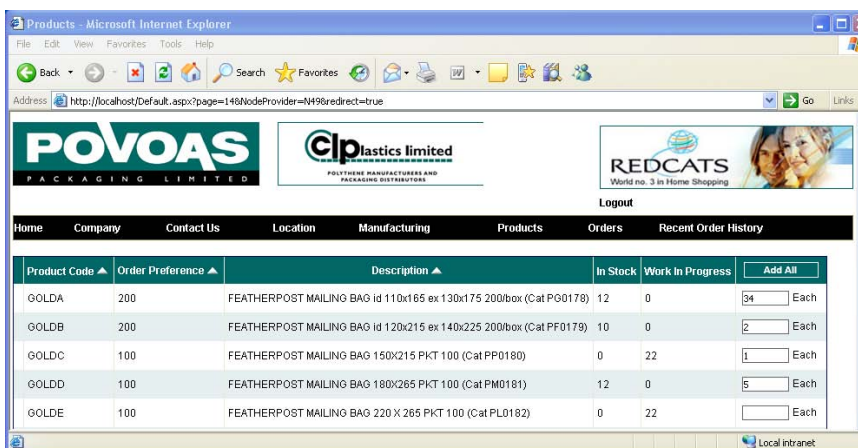

de Facto S5 eDesign enables the complete integration of your existing website marketing materials and your commercial product details, with consistent reproduction of your desired look and feel, and under your own control. With S5 eServices, you don't waste your existing website - it's incorporated into and enhanced by your powerful new eDesign site.

eData - Provides your Partners with Information

eData provides the tools to help you serve your customers, strengthen business relationships, and enables you to collaborate and provide self-service functions for suppliers, partners, employees and especially customers!

The system can be accessed on an Intranet within company, via an Extranet, or as a Website - in whichever form you choose to deploy it.
